### How Much Does CoolSculpting Cost? Defining CoolSculpting Prices

People search the internet asking how much does CoolSculpting cost? It is a valid question since fat freezing is the #1 noninvasive fat reduction treatment in the world. Yet, the overall cost of CoolSculpting treatments vary per patient, depending upon their specific treatment plan. Read on to learn what determines CoolSculpting prices and how to save money on your fat reduction treatments

#### The CoolSculpting Treatment

To understand CoolSculpting prices, it is essential to comprehend how the [fat freezing process works](#). To start, the [Advanced Rejuvenation Center in Purchase, NY](#), will place a single CoolSculpting applicator over a stubborn bulge. This applicator then draws subcutaneous fat cells to the surface and freezes them to death, employing controlled cooling. Depending on the size of the applicator, this procedure takes between 30 to 90 minutes to complete. One cooling session, using a single applicator, constitutes a cycle.

#### How Much Does CoolSculpting Cost?

CoolSculpting prices include the number of cooling cycles and the type of applicator used during that cooling session. Mirrored treatments, such as love handles, require two applicators—one per flank. This results in two cycles.

#### The Shape and Size of the Applicator

CoolSculpting applicators come in various shapes and sizes, each designed to contour specific areas of the body. This provides a lot of versatility in the fat freezing process. The number and size of applicators used to treat particular areas depending on the patient's body size and type. For freezing belly fat, one patient may require the use of two small applicators. Another individual may need one large applicator. Combining one large and one small applicator offers an additional treatment option. During your complimentary consultation, your CoolSculpting provider will professionally assess your body size and type.

The sizes of applicators vary per price. A large applicator covers double the treatment area of a small applicator. Thus, one large applicator will cost double that of a single cycle with a small applicator.

Specialty applicators add another dimension to CoolSculpting. They target specific areas of the body. For example, the CoolMini treats the submental region and is excellent in tackling neck fat and double chins. Since a CoolMini is a specialty applicator cost of a single cycle differs from other applicators.
