FREEZING FAT | REDUCE FAT CELLS WITHOUT SURGERY OR DOWNTIME

Freezing Fat | Reduce Fat Cells Without Surgery or Downtime

Freezing fat cells is a revolutionary idea made possible thanks to Cryolipolysis. This advanced cooling technology helps freeze and eliminate stubborn fat cells. CoolSculpting treatments use this technology to sculpt lean, attractive curves without surgery or downtime. This is an FDA-cleared body contouring treatment that can treat areas like the belly and thighs that commonly store extra fat cells. Continue reading to [learn more about freezing fat](#) and find out if this treatment is right for you.

Cryolipolysis | Eliminate Stubborn Bulges By Freezing Fat

Most women, and even men, struggle with stubborn fat bulges, despite following a healthy lifestyle. The truth is that stubborn fat cells tend to be diet and exercise-resistant. This means you can do all the exercises and eat tons of salads but still struggle with the same problematic bulges. Thankfully, with [Cryolipolysis](#) and CoolSculpting, you can target a specific area on the body for a freezing fat procedure.

Before this treatment, patients turned to invasive surgery like liposuction to “spot reduce” fat cells. Unlike liposuction, CoolSculpting is non-invasive and virtually painless. There is also no downtime or recovery time afterward. You can resume your normal life directly after you receive your freezing fat treatment.

Everything to Know About Freezing Fat Cells

Cryolipolysis is the science behind the calibrated cooling technology in CoolSculpting treatments. This cooling helps reduce fat cells by exposing them to freezing temperatures. During treatment, your target area is exposed to this cooling, and it ultimately freezes the fat cells.

Once the fat cells are [cold sculpted](#) and frozen, their membrane ruptures, and the cells die. Weeks after your treatment, your body naturally gathers and disposes of the dead cells via the lymphatic system. Once the fat cells are removed, they can never regrow. Therefore, CoolSculpting provides long-lasting results that you can enjoy for a long time.

Is Freezing Fat Right For Me?

To fully enjoy your CoolSculpting experience and results, you need to be the ideal candidate for treatments. Cryolipolysis is not meant to treat obesity, so it is rarely indicated for a significantly overweight patient. Instead, the ideal candidate is a healthy, active adult who still struggles with stubborn fat deposits in problem areas like the stomach. The best way to determine if you are the best freezing fat candidate is to schedule a CoolSculpting consultation. During your consultation, your treatment specialist can determine if this body contouring treatment is right for you.

WHAT IS COOLSCULPTING? AND WHAT CAN FAT FREEZING DO FOR YOU?

What is CoolSculpting? And What Can Fat Freezing Do For You?

What is CoolSculpting? It is a fat reduction treatment utilizing advanced cooling technology that freezes fat cells to death. A group of Harvard Scientists recognized that fat cells are more vulnerable to cold temperatures than skin and tissue cells. This led to a scientific process termed Cryolipolysis ("Cryo" = cold + "Lipo" = fat + "lysis" = cell death and removal.) The discovery of [Cryolipolysis](#) resulted in the invention of cooling technology (known as CoolSculpting.) Simply put, CoolSculpting causes fat cells to rupture and die without harming the overlying skin or tissue. In time these destroyed fatty deposits are eliminated as waste from the body.

[Learn more about CoolSculpting >>](#)

What is CoolSculpting Intended for?

CoolSculpting is intended for healthy women and men who are frustrated with stubborn fat bulges that resist diet and exercise. Its non-surgical technology is FDA cleared, effective, painless, safe, and requires no downtime, making CoolSculpting a highly sought-after alternative to Liposuction.

What Can CoolSculpting Treat?

What is CoolSculpting able to treat? Nearly any bulge on the body. The most requested CoolSculpting areas are the midsection (belly fat) and flanks (love handles.) [This fat-freezing technology](#) conquers fatty deposits from the chin to the knees.

Other popular areas include:

- Armpit fat (bra bulge)
- Upper arm fat
- Back fat
- Submental region (double chins and neck fat)
- The Chest (popular among men with moobs or man boobs)
- The buttocks (banana roll)
- Thighs (inner and outer thigh fat)
- Small fat deposits above the knees

What is CoolSculpting Not Intended for?

CoolSculpting is not intended for people who want to lose weight. It is a body contouring treatment that eliminates fat cells that resist diet and exercise. Weightloss treatments merely shrink fat cells. They preserve the ability of shrunken fat cells to re-expand with additional weight gain. In contrast, frozen fat cells excreted from the body are gone for good. They can't grow back. This results in long-lasting fat reduction.
