

IV BAR AND IM FAT BURNER

Why an IV Drip?

The inability to properly digest and assimilate nutrients from your diet can lead to nutrient deficiencies, which is an all too common problem in our population. The Standard American diet lacks quality nutrients and can lead to an unhealthy digestive system setting the stage for rapid aging. Even a healthy diet is no guarantee that the nutrients will be properly absorbed.

The use of intravenous therapies delivers quality nutrients directly into your bloodstream, thereby, bypassing the gastro-intestinal tract which may be malfunctioning. IV therapy treatments boost the antioxidants, vitamins, minerals, and amino acid levels in your body much more effectively than oral supplementation.

At BODYMORPH MD MEDICAL WEIGHT LOSS & AESTHETICS SERVICES, we offer a variety of IV and IM cocktails each designed to restore specific nutrients which help prevent the aging process, repair cellular damage and imbalance, hydrate the cells, improve sleep, enhance memory and mood, increase fat burning, lower stress and anxiety, boost immunity and recover your body's youthful vitality after intense workouts and exercise.
