### THE PRIAPUS SHOT

#### THE PRIAPUS SHOT

The Priapus Shot is gaining international attention, and men around the world are beginning to rave about its effects. The P-shot is given to improve a man's decreasing sexual function and [increase their sexual performance](#). As men age, experts say their sexual function declines. Men with varying health issues, including diabetes and/or vascular disease, might experience this at a younger age.

An article on the Priapus shot was recently published in "The Sun," a popular tabloid newspaper out of the United Kingdom. It features a man, who was diagnosed with Diabetes at 18. Now at age 33, and in a committed relationship, [he has trouble in the bedroom](#). The frustrating effects of his health issues make it hard to get an erection, especially when blood sugar levels are low. He eventually stopped ejaculating completely.

The Priapus Shot is now an option for the couple that wants to start a family. After experiencing several challenging sexual issues, he made an appointment to see a doctor. At Studio Eros, the Priapus Shot is an option for men, young or aging, to reap its benefits.

#### THE PRIAPUS PROCEDURE

It is important to book a Priapus Shot consultation with a trusted doctor. The Sun's article describes the steps of the treatment, and how the man suffering from Diabetes, and his partner, were able to benefit.

The procedure is said to be nearly painless, and lasts about 10 minutes. Blood is first drawn from a patient's arm – platelet rich plasma can stimulate growth and healing factors. This can grow new blood vessels and increase circulation, which can lead to stronger erections and better sexual performance. The next step in the Priapus Shot procedure is a local anesthetic. Numbing the penis creates a pain-free experience. The plasma is injected into the penis.

[Learn more about the Priapus Shot >>](#)

The article reports the Priapus Shot showed its effects right away. The couple noticed changes almost instantly – improving erections and added growth to the penis. The couple hopes to start a family soon, and with advanced technology, the Priapus Shot can make this happen for younger and older men.

#### BENEFITS OF THE PRIAPUS SHOT

Priapus Shot treatment plans at Studio Eros are tailored to fit every individual. Men report many benefits from the procedure, including increased firmness during an erection, added sexual stamina, and even enhanced appearance. For young men with continual health issues, or aging men, the P-Shot can recover former confidence.

#### MAKE PRIAPUS A REALITY

THE LASER VAGINAL TIGHTENING: NON-INVASIVE FEMININE REJUVENATION. [BLOG >](#)

### THE LASER VAGINAL TIGHTENING: NON-INVASIVE FEMININE REJUVENATION.

#### THE LASER VAGINAL TIGHTENING: NON-INVASIVE FEMININE REJUVENATION.

Laser vaginal tightening is a procedure that many women might need but may be too timid to talk about. The breakthrough technique induces the body to basically remodel the vagina. The remarkable procedure performed by doctors was created to fix several symptoms a woman might face. Childbirth, hormonal changes, and aging are common reasons that the vaginal tissue loses strength. [FemiLift laser vaginal tightening](#) is a non-invasive way to create a firmer, tighter vagina.

#### HOW IT WORKS

The FemiLift laser vaginal tightening technique uses a 30-watt CO2 laser to heat the artificial layers of the vaginal tissue. This induces the body to redevelop collagen and elastin proteins. The result, a tighter vagina. This can be a complicated subject matter for some women, but doctors use state-of-the-art lasers, which are essentially painless. The procedure is not surgery, and there is no downtime.

Laser vaginal tightening can leave lasting results to women who desire improved sensation during intercourse or hope to [decrease the symptoms of incontinence](#). There are many reasons that the vagina can loosen, but professionals say delivering multiple children, is the main culprit. For busy moms, the benefits of a 15-minute procedure, is intriguing.

[Vaginal rejuvenation surgery](#) is very different than the laser procedure. Surgery requires a patient to undergo local anesthesia and six months of downtime. Although surgery might be necessary in some cases, Dr. Mark Lowney of StudioEROS will be able to determine which procedure is most suitable.

#### CONSIDERING THE "LUNCH TIME" PROCEDURE

Women who are deliberating whether to invest in laser vaginal tightening, should know this treatment is a no-brainer. In 15 minutes, you can be in and out the StudioEros office. Prospective patients wonder if the treatment is actually painless. Former patients have never had to take any medication beforehand, and doctors say it truly is a "lunch time" procedure. No downtime-returning to work and physical activity the same day. There are basically no restrictions after, but Dr. Lowney recommends not using tampons or having sexual intercourse for three days.

The effects of laser vaginal tightening are usually noticeable three to four weeks post procedure. For lasting results, the doctors at StudioEROS suggest three procedures, performed one month apart from each other. This gives a patient the maximum vaginal tightening effect. Some patients may need yearly maintenance, but the effects of the laser procedure, are reported to last several years.

### SHOCKWAVE THERAPY FOR PAIN MANAGEMENT

#### SHOCKWAVE THERAPY FOR PAIN MANAGEMENT

Extracorporeal Shockwave Therapy is a popular and advanced way to help with pain management. Whether you are an athlete or aging, shock wave therapy can be an effective way to accelerate the healing process. The non-invasive technology can treat certain pathological alterations of several parts of the body like tendons, ligaments, muscles and bones. At [StudioEros](#), the success rates are unparalleled. Men and women report major improvements.

Common conditions treated by shock wave therapy are Plantar Fasciitis and Morton's Neuroma. Men and women who deal with chronic neck and back pain, as well as tendon issues, could benefit from shock wave therapy. The shock wave energy is used on parts of the body that experience pain. The "shock" is an audible, physical "shock," not an electric one. This accelerates the healing process by improving blood flow, stimulating the metabolism, and healing tissue damage.

[Learn more about Shockwave therapy >>](#)

#### HOW IT WORKS

The Shock wave therapy treatment at StudioEros is done by one of our trained professionals. It can take up to 15 minutes, depending on what disorder is being treated. First, a technician localizes the area of pain, and then puts a skin gel on the treatment area. This allows for the shock waves to come into the body without losing energy. Shock waves are then applied to the area of pain with a therapy head, moving in a circular motion. A person's body will respond to the shock, and metabolic activity at the treatment area should increase. This encourages the remodeling of dysfunctional collagenous tissues, like muscle strains. Most patients tolerate the pain, but the pressure can be decreased if it becomes painful.

#### BENEFITS OF SHOCK WAVE THERAPY

There are several benefits to shock wave therapy. Men and women who experience chronic pain, athletic injuries, or tendon/ligament pain, can start the healing process right in the StudioEros office. The treatment is not surgery, it is non-invasive, and does not require anesthesia. When dealing with painful areas on the body, shock wave therapy is a quick and efficient way to decrease the discomfort and increase function. No person wants to deal with pain for a long period of time. If an athlete is looking to utilize the benefits of this therapy, it can lead to quicker recovery time. Lastly, it is cost effective compared to a surgery.

#### CURE THE PAIN

To gain the best effects of shockwave therapy, StudioEros recommends three to five treatments. Patients do report immediate relief after therapy, but it can take up to four weeks. For complete results, it could take anywhere from nine to 12 weeks. Wave therapy has almost no risks or side effects, just minor discomfort in some cases.

The success stories from shock wave therapy at StudioEros are remarkable. Patients are very satisfied with the pain relief, and say, "It really works!" Book a consultation with us by calling [508-217-9014](tel:508-217-9014). Start feeling better today!
