CoolSculpting chin | Banish Your Double Chin

CoolSculpting is a revolutionary body contouring treatment that freezes away unwanted fat cells. For many years, the only way to get rid of an unwanted double chin was through invasive surgery like liposuction. Now you can have CoolSculpting chin treatments done to help eliminate fat cells and get a visibly more smooth, firm chin without surgery or recovery time.

CoolSculpting chin | Double Chin Exercises Exposed

There is a variety of different exercises in the fitness world that claim to help spot reduce fat in the chin area. Unfortunately, there is no such thing as workouts that spot reduce fat on the body. Thankfully, there is CoolSculpting! Each CoolSculpting chin treatment targets chin fat and neck fat to reduce unwanted fat cells that gather there. This body contouring treatment will help banish that embarrassing double chin or turkey neck in just a few treatments.

How CoolSculpting Chin Fat Works

CoolSculpting, a.k.a "Cold_Sculpting" uses an advanced cooling technology known as Cryolipolysis. During CoolSculpting treatments, an applicator applies this technology to the skin to penetrate the skin and target unwanted fat cells in that area. The fat cells are frozen, and once frozen, they die and process out of the body as waste. The best part is that once the fat cells die, they can never regrow in the body. This fact is how CoolSculpting helps provide you with long-lasting fat reduction and a more lean, firm body.

CoolSculpting chin Before and After Images*

CoolSculpting chin before and after pictures show the incredible fat reduction possible with each treatment. Each patient showed a significant decrease in unwanted chin fat and neck fat. As with any cosmetic procedure, results may vary.* Also, your CoolSculpting chin results will depend on the medical spa you select to visit. It's crucial to go to a spa that has expert CoolSculpting technicians on staff as CoolSculpting is a technique sensitive treatment.

CoolSculpting chin fat with the CoolMini

When CoolSculpting hit the market back in 2010, the world went wild over this revolutionary fat reduction procedure. CoolSculpting treats larger areas of the body that hold stubborn fat cells like the abdomen, back, thighs, and arms. The same makers of CoolSculpting soon introduced the CoolMini to help treat smaller, isolated areas on the body like the chin and neck. The applicator used with the CoolMini is made to fit under the chin to help reduce chin fat and neck fat.

CoolSculpting chin | Benefits of CoolSculpting

- #1 fat reduction
- FDA cleared, safe and effective
- Reduces double chin, neck wattle, and jowls
- Painless, noninvasive treatments
