Rehab Tech

Overall health and wellness have always been a passion of mine. I was a competitive year-round swimmer for a large portion of my life. I graduated from the University of Nevada, Reno in 2019 with a bachelor's in psychology with a minor in nutrition. I am originally from Pleasanton, California but am happy to call Nevada and the mountains my home now. I love the outdoors, exercising, food, and my two fur babies. Working with patients every day and seeing the results firsthand of what we do here at Reno Regenerative Medicine is extremely rewarding and I would not change it for anything.

### Kellie

Rehab Tech

I found my passion for health and patient care here at Reno Regenerative Medicine. I am originally from Dublin, CA but I moved to Reno 5 years ago and quickly found my home in the Biggest Little City. I'm a recent graduate from the University of Nevada, Reno with a Bachelors of Science in Public Health and a minor in Addiction Treatment Services. I enjoy spending my time doing yoga and playing with my Frenchie Penelope. I am thankful to be able to help our Reno community live a pain free life without drugs and surgery.

### Sue

I have a master's degree in Kinesiology and am a licensed chiropractor. I have worked in both cardiac and occupational rehabilitation in a variety of health care facilities. I was also an Associate Clinical Professor at a chiropractic college. In my spare time, I love to run and spend time in the snow.

### EMSCULPT NEO® | RESHAPE & REDEFINE YOUR BODY

Everyone has one problem: most of their body they don't think about. The most people, the subject is usually the mid-section of the body.

The reality, however, is that most people don't like going to the gym. So, they give up on their dreams of having a more toned, slimmer physique that of Bella Hadid. Fortunately, there is a way to get rid of your cellulite that doesn't involve spending months in the gym or trying diets.

Enter EMSculpt Neo. As a body contouring treatment, it's a non-invasive treatment on the abdomen. This machine builds and tones muscle in just 30-minute sessions. This may sound a little bit like a miracle, but that's exactly what it does.

However, it's not a magic pill that will suddenly melt away those extra pounds. While it does a great job of building, toning and strengthening muscle, it doesn't transform cellulite into anything else. During the treatment process, it does raise your metabolic rate significantly. So, the next time you go to the gym and lose your belly, you'll be ready.

### BENEFITS OF EMSCULPT NEO

- ✓ Build, tone, and firm muscles
- ✓ Natural-looking results
- ✓ Virtually painless with minimal downtime
- ✓ No diet or exercise
- ✓ Skin tightens and strengthens your physique
- ✓ 100% clinically proven results

### THE SCIENCE

The non-invasive EMSculpt Neo (High Intensity Focused Ultrasound) machine induces intense powerful muscle contractions not achievable through voluntary contractions. When exposed to strong contractions, the muscle tissue is forced to adapt to such extreme conditions. It responds with a deep remodeling of its inner structure that results in muscle building and reducing your body.

### EMSCULPT NEO BEFORE AND AFTER\*

### HOW DOES EMSCULPT NEO WORK?

The non-invasive EMSculpt Neo (High Intensity Focused Ultrasound) machine induces intense powerful muscle contractions not achievable through voluntary contractions. When exposed to strong contractions, the muscle tissue is forced to adapt to such extreme conditions. It responds with a deep remodeling of its inner structure that results in muscle building and reducing your body.

### HOW IT WORKS TO BUILD MUSCLE?

During voluntary activities, muscle contractions, the muscle fibers often become shorter and thicker due to the partial sarcomeres leading to equal length in muscle. After the process is over, with various EMSculpt Neo, the machine provides the full contraction of these fibers, and it can repeat multiple times during each session. Unlike other non-invasive treatments, the high intensity of these contractions that could be achieved with EMSculpt Neo is called supramaximal contraction (SMC). Usually, it's only for a short period.

To work when you are holding a weight, contracted the individual fibers are extremely strong. You have made a great use of your contractile unit in some regions to make fiber contraction. At that point, you are receiving a benefit of muscle fibers at a rate approximately 30-50%.

Contractions with a tension higher than 100% are defined as supramaximal contractions. EMSculpt Neo has the ability to generate supramaximal contractions (SMC) at your muscle fibers and build them for multiple periods, which significantly increases the strength of the muscle fibers needed to allow muscle to build. The effects on muscle tissue after repeated to these supramaximal contractions which are known as supramaximal contractions (SMC) are known as the muscle tissue is forced to adapt to such extreme conditions and respond with a deep remodeling of its inner structure.
