

Hair Restoration

All-natural, non-surgical regenerative therapy treatment to stimulate natural hair regrowth for men and women

[BOOK NOW](#)

Hair Restoration In St. Petersburg, FL

Are you frustrated with your thinning hair or receding hairline? Regenerative medicine is an all-natural hair restoration technique with proven results to regrow your hair without drugs or invasive procedures.

Whether your hair loss is caused by alopecia, using harsh chemicals on your hair, or medication side effects, Amniotic tissue allograft or Plasma injections can potentially stimulate your hair follicles to regrow hair.

These regenerative therapies have been found to work well for hair restoration and are considered an effective hair loss treatment for males and females interested in a non-surgical option.

Amniotic tissue allograft injections and Plasma injections are rich in growth factors with therapeutic properties to stimulate natural hair regrowth.

Amniotic tissue allograft sometimes called Human Connective Tissue Matrix uses the power of placental tissue to support your body's natural ability to heal. Amniotic fluid, and amniotic tissue products, are rich in cellular signaling markers that stimulate tissue regeneration in the areas being treated. Amniotic fluid for hair loss is yet another example of how regenerative medicine is changing our lives and the future of healthcare. (Fox News, 2016)

How does amniotic fluid for hair loss work?

Amniotic fluid contains many beneficial cytokines. Cytokines are a type of cell signaling protein. That means that they are like a foreman in construction and they can tell other cells where to go and what to do. Amniotic fluid cytokines consist of several different groups of proteins, some of which are growth factor cytokines. Growth factors stimulate cellular activity and tissue growth. These growth factors can stimulate various connective tissues and cell types, just like the types of tissues found in the dermal and epidermal tissues of the scalp. Let's take a look at some of the growth factors responsible for success when applying amniotic fluid for hair loss.

Innovative hair loss treatment uses amniotic fluid. (2016, June 30). Retrieved February 16, 2017, from <http://www.foxnews.com/health/2016/06/30/innovative-hair-loss-treatment-uses-amniotic-fluid.html>

EPIDERMAL GROWTH FACTOR

Epidermal Growth Factor, or EGF, is one of the major beneficial growth factors in amniotic fluid and tissue products and is responsible for cell growth and proliferation. This growth factor can essentially turn the hair follicle cells back on and kick them into a proliferation state where they are active and producing hair. This is the basic idea, although the mechanisms behind their activity are more complicated than this.

Hair Restoration Before and After*

*results may vary

Though I was nervous about my procedure, management and staff brought a lighter image my way that made my time at Water's Edge remarkable. Nurse Judy is AMAZING! God Bless you all.

I have enjoyed my experience with Waters edge medical, they are taking a personal interest in me and helping me get through my neuropathy issue. I still have a ways to go but I'm sure and have confidence they will continue to help me.

Great help for my neuropathy. Very compassionate and caring staff.
